

Nice — I'll give you a compact, usable breakdown for **all common farm equipment: typical price ranges (unit), use / capacity, where possible — cost per hectare or hire rate**, and a one-line **best option** (buy, hire, or which model/brand to prefer). I've pulled recent Indian-market figures and put sources next to each main item.

Tractors (by typical power / new price)

- **Small / mini (15–25 HP)** — ₹2.5–4.5 lakh. Good for small/market gardens and orchards; low fuel use. ([Tractor Junction](#))
 - **Mid (30–50 HP)** — ₹5–10 lakh. Best general-purpose size for 1–10 ha farms (ploughing, rotavator, seeders). ([Tractor Junction](#))
 - **High (>50 HP)** — ₹10–34+ lakh (specialised / 4WD / heavy implements). ([Tractor Junction](#))
Best option: **Mid-range 30–50 HP** from Mahindra / TAFE / Sonalika — best value for most Indian farms (buy if you have ≥3–5 ha; otherwise hire).
-

Combine harvesters / reapers

- **Mini / small combine** (rice/wheat) — ₹3–9 lakh (small self-propelled models). Larger full-sized combines go much higher. ([iharvester.com](#), [Tractor Junction](#))
 - **Custom hire / rental**: farmers commonly **hire combine services** — reported ₹3,000–3,500 per acre in many regions for paddy (≈ ₹7,400–8,600/ha), though rates vary by area and crop. For some crops/areas, operators charge lower/higher. ([The Tribune](#), [iharvester.com](#))
Best option: **Hire/Custom-harvest** unless you run large contiguous acreage (>50–100 ha) or provide contracting services.
-

Paddy transplanters / rice planters

- **Walk-behind / mini transplanters** — ₹1.9–3.7 lakh (machine) with field capacity ≈ 0.45–0.55 ha/day for walking type. Machine transplantation cost (when hired) about ₹1,100–1,500/acre (≈ ₹2,700–3,700/ha) in some regions. ([Tractor Junction](#), [The Times of India](#))
Best option: **Hire for small farms; buy if you have clustered paddy and labour shortage.**
-

Seeders / planters / multi-crop planters

- **Multi-row planters / seed drills** — ₹50,000 to ₹3,00,000+ depending on rows and automation. Super-seeders (zero-till + sowing combo) ≈ ₹0.8–3.0 lakh. ([Tractor Junction](#), [TractorKarvan](#))
Best option: **Tractor-mounted seed drill / multi-crop planter (mid-price)** — high ROI on labour and seed placement.
-

Rotavators / rotary tillers

- **Tractor-mounted rotavator** — ₹36,000 to ₹5.5 lakh (size/brand dependent). Compatible with various HP tractors. ([Tractor Junction](#), [TractorKarvan](#))
Best option: **Mid-range Fieldking / Shaktiman** models for 2–5 ha owners.
-

Power tillers / walking tractors

- **Power tiller** — ₹47,000 to ₹3.5 lakh (depending on make/power). Useful for <2–3 ha, orchards, vegetable beds. ([Tractor Junction](#), [Tractorgyan](#))
Best option: **Buy** if you run small fragmented plots regularly; **hire** otherwise.
-

Sprayers (knapsack / tractor-mounted / self-propelled)

- **Knapsack / battery sprayer (hand)** — ₹1,000–12,000.
 - **Tractor-mounted / boom sprayer** — ₹35,000–3,00,000+.
 - **Self-propelled sprayers** cost much more (lakhs).
Best option: **Battery knapsack for small plots; tractor-mounted for larger farms.**
-

Drip irrigation (per hectare) — very important

- **Drip irrigation system** (installed cost) typically ~₹35,000–1,50,000 per hectare depending on crop, spacing, pump, filters and automation. Vegetable/fruit layouts usually cost more (higher emitter density). Government subsidies often reduce farmer share. ([morcapumps.com](#), [AGRICULTURE GURUJI](#))
Best option: **Drip per ha** for high-value crops (vegetables, orchards). Use govt subsidy schemes (PMKSY/others) to lower upfront cost.
-

Sprinkler irrigation (per hectare)

- **Sprinkler systems** usually cost ₹25,000–75,000 per hectare (depends on sprinklers per ha, pump, piping). For orchards/field crops, cost and design vary. ([Times of Agriculture](#), [AGRICULTURE GURUJI](#))
Best option: **Sprinkler** for orchards/areas where drip isn't suitable.
-

Harvesters / reapers (small, single-crop)

- **Self-propelled reapers / small combine alternatives** — ₹1.5–6 lakh depending on model and capacity. Hiring rates often make sense for seasonal needs. ([Tractor Junction](#), [tractorforeveryone.com](#))
Best option: **Hire** unless you have continuous, large area.
-

Implements: ploughs, cultivators, harrows, trailers, balers

- **Plough / disc plough / cultivator / harrow** — ₹10,000 to ₹1,50,000 depending on size.

- Trailers / trolleys — ₹35,000 to ₹1,50,000+.
 - Balers — ₹1.5 lakh to many lakhs (big machines are expensive). ([Tractor Junction](#))
Best option: **Buy tractor-mounted standard implements** sized to your tractor HP.
-

Pumps (diesel / electric) & motors

- **Small electric irrigation pumps** — ₹10,000–1,00,000+ depending on HP and brand. Diesel engine pumps more expensive. Include cost of piping/filter for drip/sprinkler. (sources above on irrigation system costs include pump costs). ([morcapumps.com](#), [AGRICULTURE GURUJI](#))
Best option: **Electric pump + solar backup** if grid reliable; **diesel** where no electrification.
-

Biochar / soil-amendment tools, mechanical weeder

- **Small biochar drum pyrolyser** — ₹5,000–₹30,000 (basic to tractor-mounted units). ([morcapumps.com](#))
Best option: **Hire / cooperative ownership** for niche tools unless you're scaling specialty crops.
-

Hand tools & general purpose (shovel, khurpi, hoe, spade, forks, secateurs)

- **Common hand tools** — ₹100–1,500 each (khurpi/hand hoe ₹100–₹500; good spade ₹300–₹1,000). For bulk small-holder toolkits expect ₹2–5k. ([Flipkart](#), [mrfarmer.com](#), [Tradeindia](#))
Best option: **Buy** — cheap and essential; replace as needed.
-

Quick recommendations (one-line each)

- **If you have ≤2–3 ha:** avoid buying combines; buy a **mini / mid tractor (30–35 HP) + power tiller/implements** and use custom hire for harvesters/transplanters.
 - **3–20 ha:** buy **mid-range 35–50 HP tractor**, tractor-mounted seeders/rotavator, consider drip per ha for high-value crops.
 - **>20–50 ha:** consider buying **higher HP tractors, balers, and possibly a combine**; OR scale with contract hiring and owning key tractors.
 - **For irrigation decisions:** compare **drip (₹35k–1.5L/ha)** vs **sprinkler (₹25k–75k/ha)** based on crop type and water availability; always check subsidy options.
-

Want this as a spreadsheet or filtered by your farm size (e.g., per-ha shopping list for 1 ha / 5 ha / 20 ha)?

I can convert this into a neat **per-hectare cost table** (buy vs hire) and include **recommended makes/models** and **local dealer price estimates for Kharagpur** — tell me which farm size(s) you want and whether you prefer **buy, rent, or cooperative/shared** approach.
